

CPIA Quarterly Meeting at MBio Diagnostics August 15, 2019

Our host, Dr. Chris Myatt, is the founder and CEO of MBio Diagnostics, Inc. talked about his experience building technology companies, securing patents and licensing technology, raising funding, establishing commercial operations, and leading through growth. He shared many bits of wisdom about starting a company including 'fail fast, fail cheap', there is a lot of writing and communications involved, and expect the endeavor to experience 'near death moments.'

Prior to MBio Diagnostics, Chris successfully founded and led Precision Photonics Corp., a laser and optical technology supplier that is now a division of IDEX. Trained as a physicist and measurement scientist, Chris invented and developed multiple technologies that formed the basis of his companies.

MBio Diagnostics provides rapid, on-the-spot testing solutions for global commercial partners. Their portable LightDeck® platform delivers panels of lab-quality results in minutes for critical applications in health care, veterinary, food and environmental industries. The MBio platform brings remarkable simplicity and speed to a broad range of test modalities, from protein arrays and nucleic acid detection to cellular analysis.
